

National workshop  
Graduation from the LDC category  
Nay Pyi Taw, Myanmar, 9-10 December 2014

# The LDC criteria and indicators

Matthias Bruckner  
Committee for Development Policy Secretariat  
Department of Economic and Social Affairs  
United Nations

# Indicators of the LDC criteria

# Graduation

- ◆ In order to be eligible for graduation
  - Country passes thresholds of any 2 criteria
    - GNI and HAI
  - OR
  - GNI and EVI
  - OR
  - HAI and EVI
- OR
- Income > double income graduation threshold

# Data issues

- ◆ Data for all indicators are from international organizations
  - United Nations, UNESCO, FAO, ...
  - Ensures data is consistent and can be compared
  - LDCs need to be compared to each other and other developing countries
- ◆ International organizations rely on national data
  - Strong national statistical system critical

# **1. GROSS NATIONAL INCOME**

- ◆ All graphs in the presentation show the trend in LDC criteria and indicators by Myanmar and various country groups.
  - ◆ ESCAP: Asia Pacific countries
  - ◆ AP LDCs: LDCs in ESCAP regions
  - ◆ LDCs: All LDCs
- Based on recent refinement of the criteria.
- Use data available as of 1 December 2014.
- ◆ Note:
  - The data is different from past review data.
  - There are likely differences to the 2015 review data.

# Gross national income

- ◆ Gross national income (GNI) per capita, in \$
  - Measures resources available for consumption and investment
  - Informs about economically productive activities
- ◆ Single indicator
  - Past levels of GNI matter
  - Economic growth matters
  - Exchange rate matters
  - Population matters

# GNI per capita - definitions

- ◆  $GNI = GDP + \text{net primary income}$
- ◆  $GDP = \text{Sum of economic production/value added (+ taxes - subsidies)}$
- ◆  $GDP = \text{Consumption} + \text{Investment} + \text{Exports} - \text{Imports}$
- ◆ **Net primary income: investment income plus compensation of employees**
  - **Compensation of employees:** Income of workers that work abroad but still live in home country
    - ◆ Transfers by people that live abroad are not considered primary income
  - **Investment income:** both direct and portfolio investment abroad
    - ◆ High FDI inflows means lower future net primary income, when profits are sent home

# GNI per capita - definitions

- ◆ National Accounts:

$GNI = GDP + \text{net primary income}$

- ◆ Balance of payments:

$\text{Current account} = \text{Exports} - \text{Imports} + \text{net primary income} + \text{net secondary income}$

- National accounts and Balance of payments should contain the same information on primary income

# GNI per capita - methods

- ◆ World Bank Atlas Method converts national currencies into US \$
  - Atlas method uses three-year averages of market exchange rates
  - Method adjusts for relative inflation (measured by GDP deflator) between a country and the major developed countries (US, EU, Japan, UK)
- ◆ CDP uses three-year averages of GNI per capita as criterion
  - ◆ 2011-2013 for next triennial review

# GNI per capita - thresholds

## ◆ Inclusion:

- World Bank low-income threshold (3-year average)
- For 2015, threshold will be \$ 1,035

## ◆ Graduation:

- 20% above inclusion
- For 2015 review, threshold will be \$ 1,242
- Note: Becoming a middle-income country does not imply graduation from the LDC category

## ◆ 'Income only' graduation:

- Twice normal graduation
  - ◆ For 2015 review, \$ 2,484

## Note:

- WB thresholds are updated with inflation
- Thresholds are fixed over time in real terms

# GNI per capita – data sources

- ◆ Gross national income in current prices in Kyat
  - Reported by the CSO to United Nations Statistics Division
  - For 2013, UNSD estimate based on IMF World Economic Outlook
- ◆ Atlas conversion factors/exchange rates
  - Official exchange rate for 2013 (from IMF)
  - For previous years, United Nations Operational Exchange rates
  - GDP deflator of Myanmar (reported by CSO)
  - GDP deflator of USA, EU, Japan and UK

# GNI per capita – data sources

- ◆ Population data from United Nations Population Division WPP 2012
  - Estimate based on national sources
  - 2013: 53 259 thousand
  - Estimate higher than 2014 census, but lower than previous national estimates
  - 2014 census will be reflected in WPP 2015
  - Only small impact on GNI per capita

# GNI per capita

## ◆ Provisional estimation

– Likely to be different from final results!

|                           | 2011       | 2012       | 2013       |
|---------------------------|------------|------------|------------|
| GDP (million kyat)        | 46,344,238 | 51,727,452 | 58,843,847 |
| GNI ( million kyat)       | 46,337,208 | 51,653,416 | 58,825,215 |
| Atlas exchange rate       | 1,008.47   | 911.18     | 892.25     |
| Population (thousand)     | 52,351     | 52,797     | 53,259     |
| GNI per capita (Atlas \$) | 878        | 1,074      | 1,238      |

◆ 2011-2013 average: \$ 1,063

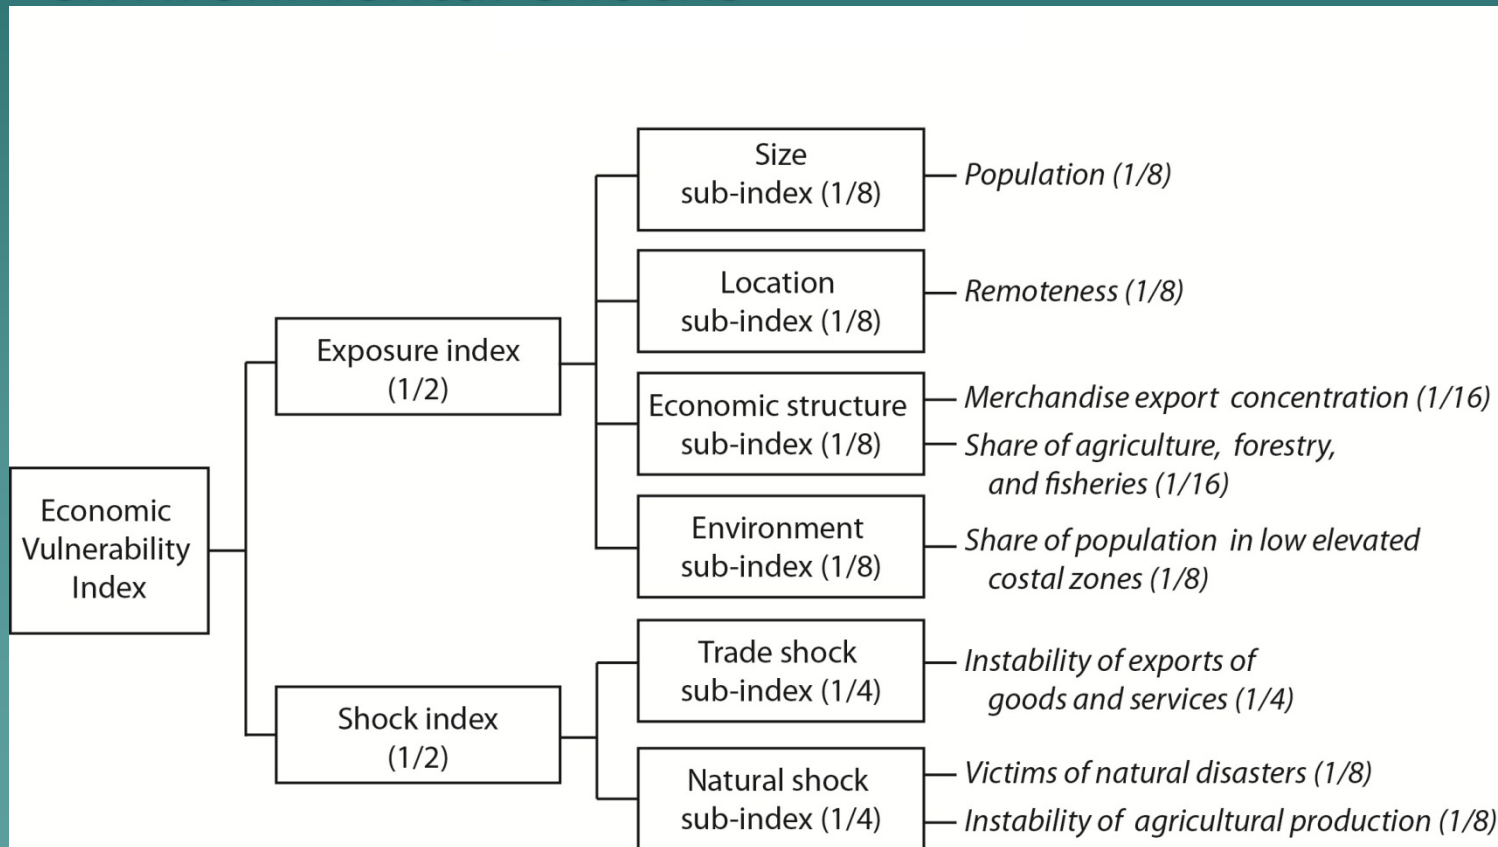

## **2. ECONOMIC VULNERABILITY INDEX**

Economic Vulnerability Index

# Economic Vulnerability Index

- ◆ Economic vulnerability index (EVI) is a measure of structural vulnerabilities to economic and environmental shocks

Numbers in brackets denote weights in overall EVI

# EVI - basics

- ◆ **EVI** is a composite index
  - Lower **EVI** scores are better
  - Indicators are converted into indices using the '**Max-min procedure**'.
  - Max and min values are based on distribution of scores for all developing countries.
  - **Upper and lower bounds** are used to reduce effect of outliers.

# Max-Min procedure

- ◆ Export concentration, 2015 review (preliminary)

|  | Myanmar | Lower bound | Upper bound |
|--|---------|-------------|-------------|
|  | 0.39    | 0.1         | 0.95        |

$$\text{Myanmar: } I = 100 \times \frac{0.39 - .1}{0.95 - .1} = 34.7$$

# EVI calculation

- ◆ **EVI** score is the weighted average of the eight individual scores
  - Myanmar, 2012 review

| Indicator                   | Score | Weight | Weighted score |
|-----------------------------|-------|--------|----------------|
| Population                  | 11.2  | 1/8    | 1.4            |
| Remoteness                  | 46    | 1/8    | 5.8            |
| Share of agriculture in GDP | 27.4  | 1/16   | 1.7            |
| Export concentration        | 63.2  | 1/16   | 4.0            |
| Share of population in LECZ | 36.8  | 1/8    | 4.6            |
| Victims of natural disaster | 58.5  | 1/8    | 7.3            |
| Agricultural instability    | 10.5  | 1/8    | 1.3            |
| Export instability          | 75.8  | 1/4    | 19.0           |

**Total EVI score for Myanmar**

**45**

# EVI - thresholds

- ◆ Inclusion: 36                      Graduation: 32
- ◆ Until 2012, the thresholds were relative
  - Set on basis of distribution of scores within a reference group of LDCs and other low-income countries
    - Number of non-LDC low-income countries shrinking: 25 in 2001; 4 in 2012
- ◆ For 2015 and beyond, thresholds are absolute
  - Fixed at their 2012 level
    - ◆ Adjustments possible if indicators or data sources change
  - Eligibility no longer depends on progress or regress of other countries
  - Increases predictability for countries

# EVI indicators (A)

## Share of agriculture, fisheries and forestry

## Export concentration

## Remoteness

## Export instability

# Share of agriculture, fisheries and forestry in GDP

- ◆ Share of agriculture, hunting, fisheries and forestry in total value added
  - Standard national accounts indicator
- ◆ High share means high exposure to shocks, as the sector is prone to natural and economic shocks
- ◆ Three-year averages
  - 2011-2013 for next triennial review
- ◆ Reported by CSO to United Nations Statistics Division
  - 2013 value estimated by UNSD

# Export concentration

- ◆ Measures sectoral dispersion of exports
  - 'Herfindahl Index'
  - Varies between (approx.) 0 and 1
    - ◆ 0: Same small amount of every product
    - ◆ 1: Only one product is exported
  - Uses 3-digit product classification
  - Covers merchandise trade only
- ◆ High index means high exposure to sector-specific shocks
- ◆ Three-year averages
  - 2011-2013 for next triennial review
- ◆ Indicator published annually by UNCTAD

# Remoteness

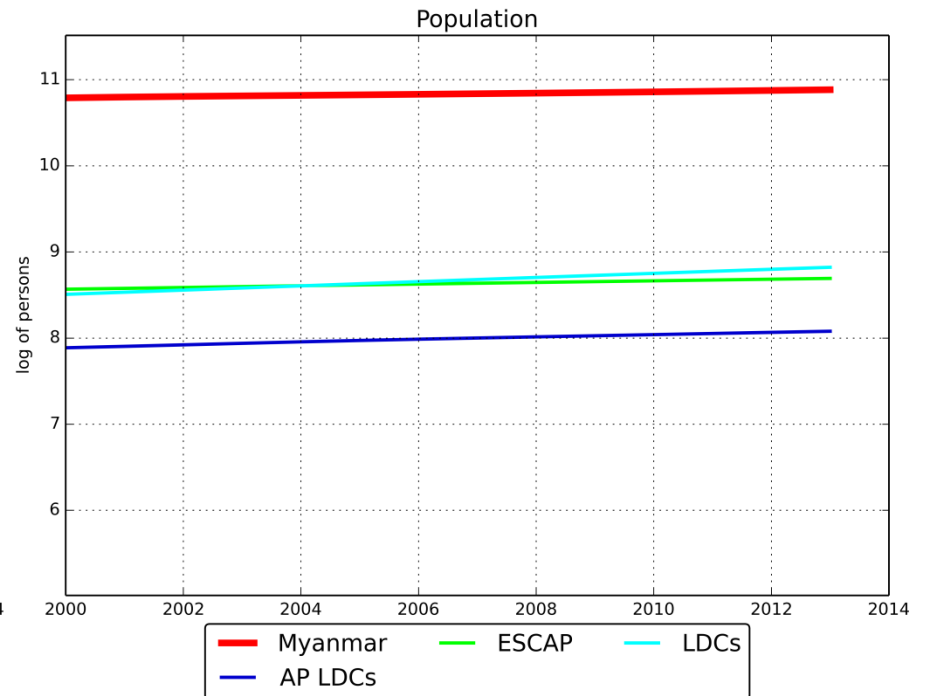

- ◆ Index measuring physical distance to world markets
  - Distances are weighted with shares of partners in world trade
    - ◆ Having large trading nations as neighbors reduces remoteness
  - Landlockedness increases index
- ◆ Remoteness increases transportation costs and limits economic diversification
  - More remote countries are more vulnerable
- ◆ Three-year averages
  - 2011-2013 for next triennial review
- ◆ Calculated by CDP Secretariat
  - Exports and Imports data from UNSD (National accounts)
  - Data on distances between capitals from CEPII

# Export instability

- ◆ **Variability of exports around trend**
  - Standard deviation of econometric regression
    - ◆ 'Mixed trend' regression
- ◆ High variability often due to external shocks
- ◆ Twenty years of data considered to calculate trend and instability
  - **1994-2013** for next triennial review
  - For short periods, reliable trends cannot be established
- ◆ Calculated by **CDP Secretariat**
  - Export data from **UNSD** (National accounts)
    - ◆ Data are reported by **CSO** in kyat (constant prices)
    - ◆ Adjustment needed due to change in exchange rate regime

## EVl indicators (B)

# Victims of natural disaster

- ◆ Average share of population that has been killed or affected by natural disasters
  - Affected means required immediate assistance
  - Weather and climate disaster
    - ◆ Flood, storm, landslide, drought, ...
  - Geophysical disaster
    - ◆ Earthquakes, volcanoes, Tsunamis
- ◆ Measures disasters and their impacts
- ◆ Twenty years of data
  - 1994-2013 for next triennial review
- ◆ Single events can still have strong impact
- ◆ Calculated by CDP Secretariat
  - Number of victims from EMDAT
    - ◆ EMDAT uses multiple sources
  - Population data from UN Population Division (WPP 2012)

# Agricultural instability

- ◆ Variability of agricultural production around trend
  - Production measured in volume, not value
  - Standard deviation of econometric regression
    - ◆ 'Mixed trend' regression
- ◆ High variability often due to external shocks
- ◆ Twenty years of data considered to calculate trend and instability
  - 1993-2012 for next triennial review
- ◆ Calculated by CDP Secretariat
  - Production data from FAO
  - Data based on national agricultural reporting

# Share of population living in low elevated coastal zones

- ◆ LECZ: Area contiguous to coast below certain elevation threshold
  - For 2015, 5m threshold
- ◆ High share indicates heightened vulnerability to climate change
  - Sea level rise, storm surge, ...
- ◆ Published by CIESIN (Columbia University)
  - Gridded population data
    - ◆ Census data, projections
  - Satellite data on elevation
  - Latest data is for 2010

# Population

- ◆ Number of people living in a country
- ◆ Larger countries less exposed to shocks
- ◆ Data is available from UN Population Division for every year in its World Population Prospects (WPP)
  - Next review will use 2014 figures
- ◆ Estimates based on national data and projection models
  - Census, surveys etc.
- ◆ WPP is updated biannually
  - Current version: WPP 2012
- ◆ WPP 2015 scheduled for summer 2015
  - WPP 2015 will reflect recent census in Myanmar
  - WPP 2012 estimate higher than 2014 census, but lower than previous national estimates

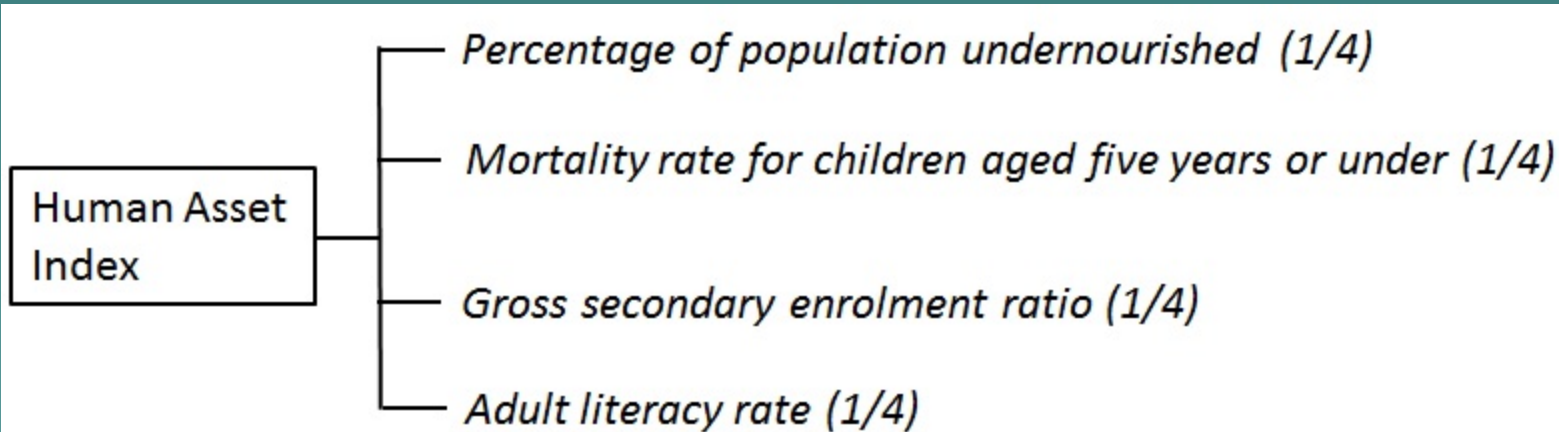

### **3. HUMAN ASSET INDEX**

Human Asset Index

# Human Asset Index

- ◆ Human asset index (HAI) is a measure of human capital available for development

# HAI - basics

## ◆ HAI is a composite index

- Higher HAI scores are better
- Indicators are converted into indices using the 'Max-min procedure'.
- Max and min values are based on distribution of all developing countries.
- Upper and lower bounds are used to reduce effect of outliers.

# Max-Min procedure

## ◆ U5MR, 2015 review (preliminary)

|  | Myanmar | Lower bound | Upper bound |
|--|---------|-------------|-------------|
|  | 50.5    | 10          | 175         |

$$\text{Myanmar: } I = 100 \times \frac{175 - 50.5}{175 - 10} = 75.5$$

## ◆ Literacy rate, 2015 review (preliminary)

|  | Myanmar | Lower bound | Upper bound |
|--|---------|-------------|-------------|
|  | 92.6    | 25          | 100         |

$$\text{Myanmar: } I = 100 \times \frac{92.6 - 25}{100 - 25} = 90.2$$

# HAI calculation

- ◆ **HAI** score is the average of the four individual scores
  - Myanmar, 2015 review (preliminary)

| Undernourishment | U5MR | Literacy | Gross secondary enrolment |
|------------------|------|----------|---------------------------|
| 80.5             | 75.5 | 90.2     | 44.7                      |

$$\text{HAI} = 1/4 \times (80.5 + 75.5 + 90.2 + 44.7) = 72.7$$

# HAI - thresholds

- ◆ Inclusion: 60                      Graduation: 66
- ◆ Until 2012, the thresholds were relative
  - Set on basis of distribution of scores within a reference group of LDCs and other low-income countries
    - Number of non-LDC low-income countries shrinking: 25 in 2001; 4 in 2012
- ◆ For 2015 and beyond, thresholds are absolute
  - Fixed at their 2012 level
    - ◆ Adjustments possible if indicators or data sources change
  - Eligibility no longer depends on progress or regress of other countries
  - Increases predictability for countries

## HAI indicators

# Adult literacy rate

- ◆ Percentage of population of age 15 or older that can read and write
- ◆ Data can be from surveys or censuses
- ◆ Latest data for Myanmar is from 2012
- ◆ Estimate by UNESCO based on
  - MICS survey from 2000
  - Demographic projection model

# Gross secondary enrolment ratio

- ◆ Students in secondary school divided by people in secondary school age
- ◆ Indicator published by UNESCO
- ◆ Data on students from national education ministries
  - Latest questionnaire received from Myanmar in 2011 (School year 2009/10)
  - Newer enrolment data could lead to higher ratio
- ◆ Population data from United Nations Population Division WPP 2012

# Under-five mortality rate

- ◆ Probability of dying between birth and age 5
  - Unit: Deaths per 1,000 births
- ◆ Indicator published annually by UN IAEG on Child Mortality Estimates
  - UNICEF, WHO, UN Population Division, World Bank
  - Latest data is for 2013
- ◆ Estimate based on estimates from various data sources:
  - Vital registration, MICS Surveys, Census, other surveys

# Proportion of population undernourished

- ◆ Share of population that consumes less than their calorie needs
- ◆ Indicator published **FAO**
  - Latest data for **2012-2014** (three year average)
- ◆ Estimate based on various inputs
  - **Food balance sheets**
    - ◆ Published by **FAO**
    - ◆ Food supply, trade and utilization
    - ◆ Food quantities converted into calories
    - ◆ Mainly from **agricultural surveys**
  - **Minimum dietary requirement**
    - ◆ Based on population data on sex and age
  - **Distribution of food consumption**
    - ◆ Based on household surveys
      - **Myanmar: HIES 2006**
